OVERVIEW

Building software is my passion. I have worked in many environments including a large company, development agencies, as well as freelancing. In doing so I discovered that working directly with the customer and helping guide the project from start to finish to be the most rewarding. I decided to start my own consulting company along with a career long colleague. Since doing so I have been rewarded by working on the most interesting projects of my career. My primary engineering experience is as a full-stack developer fluent in both Angular and React on the front-end and Django, Node.js, or Firebase on the back-end.

SKILLS

Languages and Frameworks	JavaScript	Python	Angular	Django
	Ionic	React	HTML/CSS	Firebase
Other skills	Test Driven Development	Scrum / Kanban	Ansible (DevOps)	Linux
	Progressive Web App (PWA)	Amazons Web Services (AWS)	Networking	SQL

EXPERIENCE

CTO at Northern Logic   June 2015 – Present

- Built a credit card viewing and autofill browser extension that pairs to a mobile app which generates one time use credit cards
- Built a web app that securely pairs with an app on a users device to manage email, text, contacts, and credit cards.
- Implemented a Progressive Web App for a golf site which will target consumers on all platforms with one code base. Therefore saving the client money while delivering a native experience.

Drive Current, Inc. *Senior Software Engineer*   March 2014 – June 2015

- Led a team of engineers in building a dynamic marketing and analytics platform for the auto industry.
- Worked on a hybrid cross-platform app in Ionic to help streamline inefficiencies in the lifecycle of shipping a car.

Cerner Corporation *Software Engineer*   October 2012 – March 2014

- Built an analytics solution used by over 300 hospitals to monitor system performance and optimize user workflow.

Drive Current, Inc. *Software Developer*   November 2011 – October 2012

- Helped build the largest car transport network in the US with over 12,000 users and around 2 million views a month.
- Implemented a message queue service with RabbitMQ that sends millions of email / text notifications a day.
- Worked on a clustering algorithm to enhance performance UX on a map with thousands of data points.

Independent Contractor   November 2006 – July 2011

- Developed software for a number of clients, built for the web and cross-platform.
- Built a web portal for the city I lived in at the time.

EDUCATION

University of West Florida *BS in Computer Science*   2011
